

## SYLLABUS

### 1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca
1.2	Faculty	Automation and Computer Science
1.3	Department	Mathematics
1.4	Field of study	Computer Science and Information Technology
1.5	Cycle of study	Bachelor of Science
1.6	Program of study/Qualification	Computer Science/ Engineer
1.7	Form of education	Full time
1.8	Subject code	9.

### 2. Data about the subject

2.1	Subject name		Mathematical analysis II (Integral calculus and differential equations)								
2.2	Subject area		Computer Science and Information Technology								
2.3	Course responsible/lecturer		Prof. dr. Dumitru Mircea IVAN								
2.4	Teachers in charge of applications		Lect. Mircea RUS, Lect. Adela CAPATA								
2.5	Year of study	I	2.6	Semester	2	2.7	Assessment	exam	2.8	Subject category	DF/OB

### 3. Estimated total time

Sem.	Subject name	Lecture	Applications			Lecture	Applications			Individual study	TOTAL	Credit
		[hours / week.]			[hours / semester]							
			S	L	P		S	L	P			
<b>2</b>	<b>Mathematical analysis II (Integral calculus and differential equations)</b>	<b>2</b>	<b>2</b>	<b>-</b>	<b>-</b>	<b>28</b>	<b>28</b>	<b>-</b>	<b>-</b>	<b>98</b>	<b>154</b>	<b>6</b>

3.1	Number of hours per week	4	3.2	of which, course	2	3.3	applications	2
3.4	Total hours in the teaching plan	56	3.5	of which, course	28	3.6	applications	28
Individual study								Hours
Manual, lecture material and notes, bibliography								40
Supplementary study in the library, online and in the field								14
Preparation for seminars/laboratory works, homework, reports, portfolios, essays								41
Tutoring								0
Exams and tests								3
Other activities								0
3.7	Total hours of individual study	98						
3.8	Total hours per semester	154						
3.9	Number of credit points	6						

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	Basic knowledge Integral Calculus
4.2	Competence	Competences in elementary Integral Calculus: primitives, definite integrals.

### 5. Requirements (where appropriate)

5.1	For the course	Videoprojector
5.2	For the applications	Videoprojector

### 6. Specific competences

Professional competences	<b>C1</b> – Operating with basic Mathematical, Engineering and Computer Science concepts <b>C1.1</b> – Recognizing and describing concepts that are specific to the fields of calculability, complexity, programming paradigms, and modeling computational and communication systems <b>C1.3</b> – Building models for various components of computing systems <b>C1.5</b> – Providing a theoretical background for the characteristics of the designed systems
Cross competences	N/A

### 7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	A presentation of the concepts, notions, methods and fundamental techniques used in integral calculus.
7.2	Specific objectives	Use of the integral calculus in order to solve problems in engineering.

### 8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1	Ordinary differential equations (ODE) of order one	Explanation  Demonstration  Collaboration  Interactive activities	
2	Linear homogeneous ODE with constant coefficients		
3	Linear non-homogeneous ODE with constant coefficients		
4	Positive and linear functionals.		
5	Riemann-Stieltjes integral. Primitives.		
6	Improper integrals.		
7	Integrals depending on parameters.		
8	Special functions		
9	Paths. Vector fields. Line integrals with respect to the coordinates. Circulation.		
10	Differential Forms. Exact differential forms. Path-independence. Work.		
11	Line integrals with respect to the arc length. Total mass, center of mass.		
12	Double integral. Green-Riemann formula.		
13	Surface integral. Flux of vector field across a surface. Stokes' Theorem.		
14	Volume integral. Gauss-Ostrogradsky Theorem. MATHEMATICA capabilities.		
Bibliography			
1. Mircea Ivan. Elemente de calcul integral. Mediamira, Cluj-Napoca, 2003. ISBN 973-9357-40-7.			
2. Dumitru Mircea Ivan. Calculus. Editura Mediamira, Cluj-Napoca, 2002. ISBN 973-9358-88-8.			
8.2. Applications (Seminars)		Teaching methods	Notes
1	Ordinary differential equations (ODE) of order one (Exercises)	Explanation  Demonstration  Collaboration  Interactive activities	
2	Linear homogeneous ODE with constant coefficients (Exercises)		
3	Linear non-homogeneous ODE with constant coefficients (Exercises)		
4	Positive and linear functionals (Exercises)		
5	Riemann-Stieltjes integral. Primitives (Exercises)		
6	Improper integrals (Exercises)		
7	Integrals depending on parameters(Exercises)		
8	Special functions (Exercises)		
9	Line integrals with respect to the coordinates(Exercises)		
10	Differential Forms (Exercises)		
11	Line integrals with respect to the arc length. (Exercises)		
12	Double integral. Green-Riemann formula. (Exercises)		
13	Surface integral. (Exercises)		
14	Volume integral. MATHEMATICA related capabilities. (Exercises)		
Bibliography			

1. Dumitru Mircea Ivan, et al. Analiză matematică - Culegere de probleme pentru seminarii, examene și concursuri. Editura Mediamira, Cluj-Napoca, 2002. ISBN 973-9357-20-2.
2. Mircea Ivan et al. Culegere de Probleme Pentru Seminarii, Examene și Concursuri. UT Press, Cluj-Napoca, 2000.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Collaboration with engineers in order to identify and solve problems raised by the market.

#### 10. Evaluation

Activity type	10.1	Assessment criteria	10.2	Assessment methods	10.3	Weight in the final grade
Course		Abilities of understanding and using creatively the concepts and proofs		Written examination		30%
Applications		Abilities of solving problems and applying algorithms		Written examination		70%
10.4 Minimum standard of performance						
Ability to present coherently a theoretical subject and to solve problems with practical content.						

Course responsible  
Prof.dr. Dumitru Mircea Ivan

Head of department  
Prof.dr.eng. Rodica Potolea

Other activities								
3.7	Total hours of individual study	100						
3.8	Total hours per semester	156						
3.9	Number of credit points	6						

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	Elementary knowledge of complex numbers. Elements of calculus.
4.2	Competence	Competences in using complex numbers (in algebraic and trigonometric form). Ability to calculate derivatives and real integrals.

### 5. Requirements (where appropriate)

5.1	For the course	Blackboard, videoprojector
5.2	For the applications	Blackboard, videoprojector

### 6. Specific competences

Professional competences	<p><b>C1</b> – Operating with basic Mathematical, Engineering and Computer Science concepts</p> <p><b>C1.1</b> – Recognizing and describing concepts that are specific to the fields of calculability, complexity, programming paradigms, and modeling computational and communication systems</p> <p><b>C1.3</b> – Building models for various components of computing systems</p> <p><b>C1.5</b> – Providing a theoretical background for the characteristics of the designed systems</p>
--------------------------	---

Cross competences	N/A
-------------------	-----

### 7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	A presentation of the concepts, notions, methods and fundamental techniques used in complex functions theory and integral transforms theory.
7.2	Specific objectives	Use of the complex functions theory and integral transforms theory for solving problems in engineering.

### 8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1	Complex numbers. Operations, topology in $\mathbb{C}$ .	Explanation	
2	Continuity. Monogenic functions. The Cauchy-Riemann conditions. Holomorphic functions.	Demonstration	
3	The complex integral. Definition. Cauchy's integral theorem. Cauchy's integral formula.	Collaboration	
4	Taylor and Laurent series. Singular points, classification.	Interactive activities	
5	Residues. The Residue Theorem.		
6	Applications of the Residue Theorem.		
7	Real integrals calculated with complex methods.		
8	The Fourier transform. Definition, properties.		
9	Applications of the Fourier transform.		
10	The Laplace transform. Definition and properties.		
11	The inverse Laplace transform.		
12	Applications of the Laplace transform.		
13	The $z$ transform. Applications.		
14	Difference equations. The $z$ transform applied to solving difference equations.

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	
4.2	Competence	Mathematics I, II; Physics

### 5. Requirements (where appropriate)

5.1	For the course	
5.2	For the applications	The presence of the lab is mandatory

### 6. Specific competences

Professional competences	<b>C1</b> – Operating with basic Mathematical, Engineering and Computer Science concepts
	<b>C1.1</b> – Recognizing and describing concepts that are specific to the fields of calculability, complexity, programming paradigms, and modeling computational and communication systems
	<b>C1.3</b> – Building models for various components of computing systems
	<b>C1.4</b> – Formal evaluation of the functional and non-functional characteristics of computing systems
	<b>C1.5</b> – Providing a theoretical background for the characteristics of the designed systems

Cross competences	N/A
-------------------	-----

7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	
7.2	Specific objectives	

8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1	Electric and magnetic quantities. Static electric and magnetic fields (the electric field in free space and in material, electric current, the magnetic field in free space and in material)	Multimedia, PowerPoint Presentations, Demonstration board	
2	Laws and theorems of electromagnetic field		
3	Electrical capacitance, energy and forces		
4	Magnetic circuits. Self-inductance and mutual inductance. Magnetic energy and forces.		
5	Basic concepts, units and laws of circuit theory (characteristic values, power in sinusoidal regime, representation of sinusoidal functions by vectors and complex numbers)		
6	The characterisation of the linear circuits in complex plane, the complex form of some theorems		
7	Equivalent impedances (series and parallel connection, without mutual inductance, with mutual inductance, real condenser, real inductance, air core transformer)		
8	Resonance (in series, parallel, real, inductively coupled circuits, power factor improvement)		
9	Two-port networks (equations, equivalent circuits, open-circuit and short-circuit tests, characteristic impedance, propagation constant, filters)		
10	Network theorems (th superposition theorem, Thevenin-Norton theorem, mesh or loop analysis, node analysis, matrix methods)		
11	Transient regime of linear circuits (continuity conditions, transient behaviour of the R-L, R-C and R,L,C)		
12	Transient regime of linear circuits (the Laplace transform, Duhamel integral, state variable method)		
13	Study-state periodic non-sinusoidal regime (Fourier expansion, power, network analysis)		
14	Transmission lines (the primary line parameters, the equations of the transmission line, voltage and current waves on long lines, distortionless lines)		
Bibliography			
<ol style="list-style-type: none"> <li>1. The Theory of Electric Circuits, authors: RV Ciupa, V. Ţopa, Casa Cartii de Stiinta Publishing House, 2003, ISBN 973-9204-98-8</li> <li>2. 8.2. Applications (Laboratory)		Teaching methods	Notes
1	Determination of the spectrum and equipotential surfaces of an electric field using a electrokinetic model	Practical exercises	
2	The study of a magnetic circuit. The measurement of the iron losses using an oscilloscope		
3	Representation of sinusoidal functions by vectors and complex numbers		
4	Analysis of the R,L,C series and parallel circuits, of the voltage and current resonances		
5	Power transfer in inductively coupled circuits		
6	The study of a circuit in non-sinusoidal regime		
7	The study of the transient regime, methods for solving circuits in transient		

regime		
Bibliography 1. Răduleț, R., <i>Bazele electrotehnicii. Probleme.</i> , E.D.P., București, 1981 2. Micu, D.D., Creț, Laura, Duma, Denisa, <i>Teoria circuitelor electrice. Culegere de probleme.</i> , UTPress, Cluj-Napoca, 2005

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	Logic Design
4.2	Competence	At least one high level programming language (i.e. C or PASCAL)

### 5. Requirements (where appropriate)

5.1	For the course	• A minimum of 75% course attendance rate is mandatory for being admitted to the final exam
5.2	For the applications	• Preliminary preparation of summaries from the indicated bibliography (laboratory textbook)

### 6. Specific competences

Professional competences	<b>C2 – Designing hardware, software and communication components</b> <b>C2.1 - Describing the structure and functioning of computational, communication and software components and systems</b> <b>C2.2 – Explaining the role, interaction and functioning of hardware, software and communication components</b> <b>C2.3 – Building the hardware and software components of some computing systems using algorithms, design methods, protocols, languages, data structures, and technologies</b> <b>C2.4 – Evaluating the functional and non-functional characteristics of the computing systems using specific metrics</b> <b>C2.5 – Implementing hardware, software and communication systems</b>
Cross competences	N/A

### 7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	<ul style="list-style-type: none"> <li>The main objective of this discipline is to give to the students the bases of Digital Systems Design, in order to make them able to analyze, design and implement any complex digital system.</li> </ul>
7.2	Specific objectives	<p>To reach this goal, students will learn to:</p> <ul style="list-style-type: none"> <li>Apply Digital System Design principles and descriptive techniques;</li> <li>Understand various aspects of Automata Theory with applications in the field of Digital Systems Design;</li> <li>Describe any digital system in VHDL;</li> <li>Utilize programmable devices such as FPGAs and PLDs to implement digital systems.</li> </ul>

### 8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1	VHDL hardware description language – basic design units, signals	Blackboard presentation discussions	N/A
2	VHDL hardware description language – generics, constants, operators, data types, attributes		
3	VHDL hardware description language – sequential domain		
4	VHDL hardware description language – concurrent domain		
5	Creating testbenches for simulating and testing circuits in VHDL		
6	Automata (Finite State Machines) Theory – classification, definitions, formal models		
7	Microprogramming		
8	Microprogrammed Devices		
9	Designing Synchronous Automata		
10	Analysis and Design (Synthesis) of Asynchronous Automata (I)		
11	Analysis and Design (Synthesis) of Asynchronous Automata (II)		
12	Automata Identification		
13	Lossless Machines		
14	Linear Automata		
<b>Bibliography</b> 1. Digital Design Principles and Practices, John F. Wakerly, Prentice-Hall, 2000. 2. Automate programabile, Th. Borangiu, R. Dobrescu, Ed. Academiei, 1986. 3. Advanced Digital Logic Design Using VHDL, State Machines, and Synthesis for FPGA's, Sunggu Lee, Thomson-Engineering; 1 edition (April 25, 2005), ISBN 0534466028. 4. PowerPoint slides for VHDL and Automata Theory lectures + sets of problems for the individual study: <a href="http://users.utcluj.ro/~lucia/index.html">http://users.utcluj.ro/~lucia/index.html</a>			
8.2. Applications (Laboratory)		Teaching methods	Notes
1	Introduction to VHDL	Practical work on test boards,	N/A
2	Basic design units in VHDL		

3	Signals, generics, constants, in VHDL	FPGA boards, specialized software, blackboard presentations, supplemental explanations and discussions			
4	Operators, data types in VHDL				
5	Attributes in VHDL				
6	Sequential domain. Processes in VHDL				
7	Sequential statements in VHDL				
8	Concurrent domain in VHDL				
9	Concurrent statements in VHDL				
10	Sub-programs in VHDL				
11	Testbenches in VHDL				
12	Standard and predefined packages in VHDL				
13	Mini-projects delivery				
14	Lab test				
Bibliography					
1. Limbajul VHDL, Îndrumător de laborator, Ediția a-3-a. O. Creț, L. Văcariu, Ed. U.T. Press, Cluj-Napoca, 2007.					
2. PowerPoint slides for VHDL and Automata Theory lectures + sets of problems for the individual study: <a href="http://users.utcluj.ro/~lucia/index.html">http://users.utcluj.ro/~lucia/index.html</a>					

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

• Since this discipline is a basic one in Computer Science, its content is “classic” but also modern because it familiarizes students with the modern principles of Logic Design (utilization of modern simulation and synthesis tools, FPGA and CPLD-based design etc.). Its contents have been discussed with major academia and industry actors from Romania, Europe and U.S.A. and it has been evaluated several times by Romanian Governmental Agencies like CNEAA and ARACIS.

#### 10. Evaluation

Activity type	10.1	Assessment criteria	10.2	Assessment methods	10.3	Weight in the final grade
Course		Problems solving abilities		Written Exam		60%
		Presence, (Inter)activity				
Homeworks		Problems solving abilities		Practical Evaluation		20%
Applications		Problems solving abilities		Practical Evaluation (hands-on)		20%
		Presence, (Inter)activity				
10.4 Minimum standard of performance						
• Modeling and solving typical Digital Systems Design problems using the domain-specific formal apparatus						

Course responsible  
Prof. dr. eng. Creț Octavian Augustin

Head of department  
Prof.dr.ing. Rodica Potolea

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	Computer Programming course
4.2	Competence	Programming in C

### 5. Requirements (where appropriate)

5.1	For the course	
5.2	For the applications	

### 6. Specific competences

Professional competences	<b>C1</b> – Operating with basic Mathematical, Engineering and Computer Science concepts <b>C1.1</b> – Recognizing and describing concepts that are specific to the fields of calculability, complexity, programming paradigms, and modeling computational and communication systems <b>C1.2</b> – Using specific theories and tools (algorithms, schemes, models, protocols, etc.) for explaining the structure and the functioning of hardware, software and communication systems <b>C1.4</b> – Formal evaluation of the functional and non-functional characteristics of computing systems <b>C1.5</b> – Providing a theoretical background for the characteristics of the designed systems
Cross competences	N/A

### 7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	To acquaint the students with a wide range of fundamental algorithms and data structures. To learn how to use general methods for development of algorithms, as well as mathematical tools for analyzing the correctness and efficiency of algorithms.
7.2	Specific objectives	<ul style="list-style-type: none"> <li>• To choose the appropriate data structure for modelling a given problem.</li> <li>• To compare and contrast the cost and benefits of dynamic and static structure implementations.</li> <li>• To compare iterative and recursive solutions for elementary problems.</li> <li>• To determine when a recursive solution is appropriate for a problem.</li> <li>• To determine the time and space complexity of simple algorithms and recursively defined algorithms.</li> <li>• To design and implement algorithms using development techniques such as: greedy, divide-and-conquer, backtracking, dynamic programming, branch and bound.</li> <li>• To write C programs that use data structures such as: arrays, linked lists, stacks, queues, trees, hash tables, and graphs.</li> <li>• To implement in C the most common sorting algorithms.</li> </ul>

### 8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1	About the course (objectives, outline, recommended reading). Problem solving. Notions of Algorithmics (growth of functions, efficiency, programming model). Stacks, queues. Lists	Lectures, demos and discussions	Uses a video-projector
2	More on lists. Implementation issues.		
3	Trees – definitions, traversals. ADT Tree. Implementations. Binary Search Trees.		
4	Sets ADTs and Implementations. Dictionary ADT. Hash Tables. Mapping ADT.		
5	Priority Queue ADT. Tries		
6	Advanced Set Representation Methods. AVL trees. 2-3 Trees. Union-Find Set ADT.		
7	Directed Graphs. Definitions. Representations. ADT's. Single Source Shortest Path Problem (Dijkstra, Bellman-Ford, Floyd-Warshall). Traversals for DGs. Parenthesis Lemma. DAGs. Topological Sort		
8	Undirected Graphs. Terminology. Free Trees. Graph Representations. Graph Traversals (depth-first, breadth-first). Articulation points & Biconnected Components.		
9	Algorithm Design Techniques I. Brute Force Algorithms. Greedy Algorithms.		
10	Algorithm Design Techniques I. Divide-and-Conquer.		
11	Algorithm Design Techniques II. Dynamic Programming.		

12	Algorithm Design Techniques III. Backtracking. Search Tree Strategies (branch and bound)		
13	Algorithm Design Techniques IV. Search Tree Strategies (branch and bound). Local Search.		
14	Internal Sorting

3. Preiss, Bruno. Data Structures and Algorithms with object-Oriented Design Patterns in C++, John Wiley and Sons, 660 pages, 1999 (freely available on the Web)

8.2. Applications (Laboratory)		Teaching methods	Notes
1	Review of C Programming.	Tutoring, discussions, and assisted program development	PCs equipped with MinGW C and Code-blocks IDE
2	Singly-linked Lists, Stacks and Queues.(Array-based and Dynamic Allocation Implementations)		
3	Doubly Linked and Circular Lists		
4	Arbitrary Trees. Binary Trees		
5	Binary Search Trees		
6	Hash Tables.		
	<b>Laboratory Test 1</b>		
7	Graph Representations and Traversals (BFS, DFS and applications)		
8	Algorithm Design I. Greedy		
9	Algorithm Design II. Divide & Conquer		
10	Algorithm Design III. Dynamic Programming and Heuristics.		
11	Algorithm Design IV Backtracking and Branch and Bound		
12	Review. Evaluation of extra-credit problems		
	<b>Laboratory Test 2</b>		

#### Bibliography

1. Moodle course Web Site available at <https://193.226.5.110>

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

#### 10. Evaluation

Activity type	10.1	Assessment criteria	10.2	Assessment methods	10.3	Weight in the final grade
Course		The understanding of the concepts taught and the ability to solve problems		Three in-class tests (T) + Final Written exam (W)		65% = 50% W + 15% T
Applications		Quality of the assigned applications		Analysis and evaluation of the solved assignments		35%

#### 10.4 Minimum standard of performance

Correct solutions for min. 60% of the exam topics and applications

## SYLLABUS

### 1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca
1.2	Faculty	Automation and Computer Science
1.3	Department	Computer Science
1.4	Field of study	Computer Science and Information Technology
1.5	Cycle of study	Bachelor of Science
1.6	Program of study/Qualification	Computer Science/ Engineer
1.7	Form of education	Full time
1.8	Subject code	14.

### 2. Data about the subject

2.1	Subject name	Foreign Language II (English, French, German)									
2.2	Subject area	Computer Science and Information Technology									
2.3	Course responsible/lecturer										
2.4	Teachers in charge of applications	Asist. drd. Ema Adam, <a href="mailto:adam@lang.utcluj.ro">adam@lang.utcluj.ro</a> Asist.dr. Monica Negoescu, <a href="mailto:Negoescu@mail.utcluj.ro">Negoescu@mail.utcluj.ro</a> Asist.dr. ### 4. Pre-requisites (where appropriate)

4.1	Curriculum	A2/B1 according to the Common European Framework for Languages
4.2	Competence	Team work

### 5. Requirements (where appropriate)

5.1	For the course	N/A
5.2	For the applications	Seminar attendance compulsory

## 6. Specific competences

Professional Competences	N/A
Cross competences	<b>CT2</b> – Identifying, describing and conducting processes in the projects management field, assuming different roles inside the team and clearly and concisely describing, verbally or in writing, in Romanian and in an international language, the own results from the activity field

## 7. Discipline objectives (as results from the *key competences gained*)

7.1	General objective	Development of communicative competence in an engineering professional context
7.2	Specific objectives	- Mastering basic vocabulary and language structures typical of sciences studied - Development of the skill of writing short technical texts and of presenting them

## 8. Contents

8.1. Lecture (syllabus)		Teaching methods	Notes
1			
Bibliography			
8.2. Applications (Seminars)		Teaching methods	Notes
1	Engineering and automation.	Conversation, improving the reading, writing, speaking, listening skills, working in pairs and groups	
2	Microelectronics and nanotechnology		
3	Computers in industry		
4	Design of products. Definition		
5	Procedures		
6	Systems of communication		
7	Monitoring		
8	Types of networks, The Internet		
9	Engineers and managers		
10	The responsibilities of the manager		
11	Companies		
12	Organisations and their culture		
13	Final test		
14	Final test

## 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Mastering a foreign language will help students in a more flexible integration in the labour market, and have

improved personal development. The introduction in the language for specific purposes will facilitate reading more documents in the field of study.

#### 10. Evaluation

Activity type	10.1	Assessment criteria	10.2	Assessment methods	10.3	Weight in the final grade
Course						
Applications		Assignments and tests are corrected and marked if submitted in due time. The undergraduate will be allowed to sit in the final test if he/she attends seminars in a proportion of 80% of the time.		Written test, Oral test		100%.

#### 10.4 Minimum standard of performance

The undergraduate will be allowed to sit in the final test if he/she attends seminars in a proportion of 80% of the time.

Final score: attendance= 1pct, written test =5 pct, oral test =4 pct.

Pass score is received if 60 % of both tests is produced by the undergraduate.
