SYLLABUS

1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	32.

2. Data about the subject

2.1 Subject name	***Functional programming***				
2.2 Course responsible/lecturer	Conf. dr. ing. Radu Razvan Slavescu – Radu.Razvan.Slavescu@cs.utcluj.ro				
2.3 Teachers in charge of seminars/ laboratory/ project	Ing. Istvan Csaszar Ing. Vanessa Mercea Ing. Andrei Santoma Ing. Marina Trif Ing. Irina Petrea Ing. Zsofia Fodor				
2.4 Year of study	III	2.5 Semester	1	2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E
2.7 Subject category	*DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară*				DD
	DI – Impusă, DOp – opțională, DFac – facultativă				DI

3. Estimated total time

3.1 Number of hours per week	4	of which:	Course	2	Seminars		Laboratory	2	Project	
3.2 Number of hours per semester	56	of which:	Course	28	Seminars		Laboratory	28	Project	
3.3 Individual study:										
(a) Manual, lecture material and notes, bibliography										18
(b) Supplementary study in the library, online and in the field										10
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays										10
(d) Tutoring										4
(e) Exams and tests										2
(f) Other activities:										
3.4 Total hours of individual study (suma (3.3(a)…3.3(f)))										44
3.5 Total hours per semester (3.2+3.4)										100
3.6 Number of credit points										4

4. Pre-requisites (where appropriate)

4.1 Curriculum	Data Structures and Algorithms Course
4.2 Competence	This course assumes no prior knowledge of functional programming, but advises at least one year of programming experience in a regular programming language such as Java, C, C++.

5. Requirements (where appropriate)

5.1. For the course	Whiteboard, beamer, computer
5.2. For the applications	Computers, interpreters/compilers for the studied languages 100% lab presence for final exam access

6. Specific competence

6.1 Professional competences	**C2** Designing a software system in a functional manner **C2.1** Identifying and describing the software components of the system **C2.2** Explaining the role, interaction and functioning of each component **C2.3** Building software components of some computing systems using design methods, languages, technologies and tools specific to Functional Programming **C2.4** Implementing the software components in functional style, in an idiomatic and efficient manner **C2.5** Evaluating the functional and non-functional characteristics of the computing system using specific performance metrics and proving its corectness
6.2 Cross competences	N/A

7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	Increasing the ability to develop correct and more concise code via the functional paradigm elements (immutability, high level of abstractization, formal proof of code correctness, easy parellelization) and to understand its underpinning formalism (lambda calculus)
7.2 Specific objectives	Writing better code with the concepts introduced by functional programming: - immutability of variables - recursivity and its optimization - high order functions - lazy evaluation mechanisms and infinte structures - basics of lambda calculus - formal proofs of program corectness

8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction. Programming Paradigms. Basic concepts of programming in Haskell, Elm: functions, identifiers, recursion.	2	(Onsite/online) Slides, Demos on the whiteboard, New examples Quick individual work (1 minute)	
Basic concepts: recursion, constants, primitive data types, tuples, infix operators, evaluation.	2		
Basic concepts: local declarations, data types, polymorphism.	2		
Lists: list construction, basic operations on lists.	2		
Lists: list operators (generators, guards, list comprehensions).	2		
Trees: alternative data, pattern matching, exceptions, binary trees, list-tree conversions.	2		
Trees: binary search trees, checking AVL balance property for trees, printing.	2		
Implementing operations on sets. Propositional reasoner	2		
Higher-order functions: anonymous functions, partial application, relations functions – data, combinator functions	2		
Higher-order functions for lists (map, filter, fold).	2		
Infinite data: lazy evaluation, unbounded objects, circular structures.	2		
Lambda calculus: Lambda notation, conversions, combinators.	2		
Reasoning on program correctness: structural induction, equivalence of functions, induction on the number of nodes.	2		
Monads. Example of use cases.	2

** Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.*

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

The content of the class is similar to the contents taught at other international universities (Programming Paradigms, Parallel and Concurrent Haskell). The course is focused on the techniques of Functional Programming which have been adopted by the modern (multiparadigm) languages and also on the possibility of proving program correctness in a formal manner. Students are encouraged to identify Functional Programming ideas in the current practice of local IT companies.

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Understanding functional programming elements and its theoretical background. Class participation, Homework	(Onsite) Written exam/Moodle test	50%
Seminar			
Laboratory	Quantity and quality of code in Elm, Haskell Ability to find and fix code bugs	(Onsite) Individual assignments and mini-project	50%
Project			
Minimum standard of performance: Understanding and code writing for the following concepts; Recursion, High Order Functions, Pattern Matching. Grade calculus: 50% laboratory + 50% final exam Conditions for participating in the final exam: Laboratory Mark Average ≥ 5 Conditions for promotion: Exam Mark Average ≥ 5			

Date of filling in:	Titulari	Titlu Prenume NUME	Semnătura
