

## SYLLABUS

### 1. Data about the program of study

1.1	Institution	The Technical University of Cluj-Napoca
1.2	Faculty	Automation and Computer Science
1.3	Department	Computer Science
1.4	Field of study	Computer Science and Information Technology
1.5	Cycle of study	Bachelor of Science
1.6	Program of study / qualification	Computer Science / Engineer
1.7	Form of education	Full time
1.8	Subject code	8.00

### 2. Data about the subject

2.1	Subject name	<b>Mathematical analysis II (Integral calculus and differential equations)</b>									
2.2	Course responsible / lecturer	Prof. PhD. Dumitru-Mircea Ivan - <a href="mailto:mircea.ivan@math.utcluj.ro">mircea.ivan@math.utcluj.ro</a>									
2.3	Teachers in charge of applications	Assoc. prof. PhD. Mircea Rus - <a href="mailto:rus.mircea@math.utcluj.ro">rus.mircea@math.utcluj.ro</a>									
2.4	Year of Study	I	2.5	Semester	2	2.6	Assessment	Exam	2.7	Subject category	DF/DI

### 3. Estimated total time

3.1	Number of hours per week	4	of which,	lectures	2	applications	2	
3.2	Total hours in the teaching plan	56	of which,	lectures	28	applications	28	
3.3	Individual study							
	(a) Manual, lecture material and notes, bibliography							28
	(b) Supplementary study in the library, online and in the field							7
	(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays							28
	(d) Tutoring							3
	(e) Exams and tests							3
	(f) Other activities							0
3.4	Total hours of individual study (sum of 3.3(a) ... 3.3(f))							69
3.5	Total hours per semester (3.2 + 3.4)							125
3.6	Number of credit points							5

### 4. Pre-requisites (where appropriate)

4.1	Curriculum	Mathematical analysis: high school, 12th grade, M1 profile 1.00 Mathematical analysis I (Differential calculus): year 1, semester 1
4.2	Competence	Competences of the above curriculum

### 5. Requirements (where appropriate)

5.1	For the lectures	Whiteboard and markers / blackboard and chalk, video projector, computer, graphic tablet
5.2	For the applications	Whiteboard and markers / blackboard and chalk, video projector, computer, graphic tablet

### 6. Specific competences

6.1	Professional competences	<b>C1</b> – Operating with basic mathematical, engineering, and computer science concepts <b>C1.1</b> – Recognizing and describing concepts that are specific to the fields of calculability, complexity, programming paradigms, and modeling computational and communication systems <b>C1.2</b> – Using specific theories and tools (algorithms, schemes, models, protocols, etc.) to explain the structure and operation of hardware, software, and communication systems <b>C1.3</b> – Building models for various components of computing systems <b>C1.4</b> – Formal evaluation of functional and non-functional characteristics of computing systems <b>C1.5</b> – Providing a theoretical background for the characteristics of the designed systems
6.2	Cross competences	N/A

### 7. Discipline objectives (as results from the key competencies gained)

7.1	General objective	Knowledge of the fundamentals of integral calculus and differential equations from the perspective of their application in engineering.
7.2	Specific objectives	Knowledge of fundamental notions, methods, and techniques regarding ordinary differential equations, integrals, and special functions; their application in the mathematical modeling of engineering problems and their solution.

## 8. Contents

8.1	Lecture (syllabus)	No. of hours	Teaching methods	Notes
	Introduction to Ordinary differential equations (ODEs). Mathematical models based on ODEs.	1	Expository teaching Problematization Learning through discovery Demonstration Collaboration Individual study	
	ODEs of order one in the explicit form: separable ODEs, homogeneous ODEs, linear ODEs, Bernoulli's ODEs, Riccati's ODEs.	2		
	ODEs of order one in the implicit form: Clairaut's ODEs, Lagrange's ODEs.	1		
	Linear ODEs of higher order with constant coefficients: homogeneous, non-homogeneous; the method of variation of constants.	2		
	Positive and linear functionals. The Riemann-Stieltjes integral. Primitives.	2		
	Improper integrals.	2		
	Integrals depending on parameters.	2		
	Special functions.	2		
	Paths. The line integral with respect to the length. The line integral with respect to the coordinates.	3		
	Differential forms. Exact differential forms. Path-independence of line integrals. Geometric and physical applications of line integrals.			
	The double integral. The Green-Riemann Formula.	2		
	The surface integral with respect to the area. The surface integral with respect to the coordinates. The Stokes Theorem. Geometric and physical applications of surface integrals.	3		
	The triple integral. The Gauss-Ostrogradsky Theorem.	2

8.2.	Applications (Seminars)		Teaching methods	Notes
	The topics covered in the seminars are identical to those in the lectures (see 8.1); they are completed in the same order and take the same number of hours. The theoretical aspects covered in the lectures are illustrated by examples, problem-solving and specific applications.		The conversation; problem solving and discovery learning; the analogy; the exercise; modeling; homework and individual study; collaboration.

## 9. Bridging course contents with the expectations of the representatives of the community, professional associations, and employers in the field

Mathematical analysis is a core discipline in mathematics. The discipline's content is almost identical to that of other technical universities in the country and abroad and is adapted to the requirements in the field of engineering sciences.

**10. Evaluation\***

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Ability to understand and use the concepts and proofs creatively	Written examination	40%
Applications	Ability to solve problems.	Written examination and continuous evaluation during the semester	60%
* For details (according to Art 6.3-2 of the REGULATION REGARDING THE PROFESSIONAL ACTIVITY OF STUDENTS USING THE ECTS SYSTEM): the student evaluation methods and the evaluation criteria will be brought to the student's attention by the teaching staff at the first teaching activity. They cannot change during the current year.			
Minimum standard of performance: Ability to present a theoretical subject coherently and to solve problems.			

Date of filling in:	Teachers	Title First name Last name	Signature
06.06.2023	Course	Prof. PhD. Mircea Ivan	
	Applications:	Assoc. prof. PhD. Mircea Rus	

<b>Date of approval by the Department Board</b> 08.06.2023	Head of Department of Mathematics, Prof. PhD. Dorian Popa
<b>Date of approval by the Faculty Council</b>	Dean, Prof. PhD. eng. Liviu Miclea
