SYLLABUS

1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study / Qualification	Computer science / Engineer
1.7 Form of education	Full time
1.8 Subject code	26.

2. Data about the subject

2.1 Subject name			Operating Systems				
2.2 Course responsible / lecturer			Assoc. prof. dr. eng. Adrian Coleşa - adrian.colesa@cs.utcluj.ro				
2.3 Teachers in charge of se laboratory / project	f seminars /		Assoc. prof. dr. eng Adrian Coleşa - <u>adrian.colesa@cs.utcluj.ro</u> Assist.drd.eng. István Császár - <u>icsaszar@outlook.com</u>				
2.4 Year of study	II	2.5 Sem	hester 2 2.6 Type of assessment (E - exam, C - colloquium, V - verification)			E	
2.7 Subject estagen	DF –	fundame	amentală, DD – în domeniu, DS – de specialitate, DC – complementară DD				
2.7 Subject category	DI – I	mpusă, l	DOp – d	pțior	nală, DFac – facultativă	DI	

3. Estimated total time

3.1 Number of hours per week	4	of which:	Course	2	Seminars		Laboratory	2	Project	
3.2 Number of hours per semester	56	of which:	Course	28	Seminars		Laboratory	28	Project	
3.3 Individual study:										
(a) Manual, lecture material	and no	tes, biblio	graphy							25
(b) Supplementary study in t	he libra	ary, online	and in th	ne fiel	d					10
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays							28			
(d) Tutoring								2		
(e) Exams and tests							4			
(f) Other activities:										0
3.4 Total hours of individual study (suma (3.3(a)3.3	B(f)))		69					
3.5 Total hours per semester (3.2+3.4) 125										
3.6 Number of credit points					5					

4. Pre-requisites (where appropriate)

4.1 Curriculum	Computer Programming, Data Structures and Algorithms
4.2 Competence	C programming

5. Requirements (where appropriate)

5.1. For the course	Blackboard / Whiteboard, Beamer
5.2. For the applications	Computers, Linux, Windows, Blackboard / Whiteboard

6. Specific competence

6.1 Professional competences	 C3: Problems solving using specific Computer Science and Computer Engineering tools (3 credits) C3.1 Identifying classes of problems and solving methods that are specific to computing systems
	•C3.2 Using interdisciplinary knowledge, solution patterns and tools,

6.2 Cross competences	N/A
6.2 Cross competences	 •C3.4 Evaluating, comparatively and experimentally, the available alternative solutions for performance optimization •C3.5 Developing and implementing informatic solutions for concrete problems C4: Improving the performances of the hardware, software and communication systems (2 credits) •C4.1 Identifying and describing the defining elements of the performances of the hardware, software and communication systems •C4.2 Explaining the interaction of the factors that determine the performances of the hardware, software and communication systems •C4.3 Applying the fundamental methods and principles for increasing the performances of the hardware, software and communication systems •C4.4 Choosing the criteria and evaluation methods of the performances of the hardware, software and communication systems •C4.5 Developing professional solutions for hardware, software and communication systems
	 making experiments and interpreting their results C3.3 Applying solution patterns using specific engineering tools and methods

7. Discipline objective (as results from the key competences gained)

7.1 General objective	Provide the students a clear understanding of what an OS is, its role and general functionality and the ability to use fundamental system calls of an OS.			
7.2 Specific objectives	Let the students:			
	1. Know and understand the OS specific terminology.			
	2. Understand the general structure and functionality of an OS.			
	3. Understand the specific functionality of the most important OS			
	components, like shell, process manager, file system, memory manager,			
	security manager.			
	4. Understand the functionality of main synchronization mechanisms and be			
	able to use them to solve real synchronization problems.			
	5. Be able to write C programs to use an OS's (Linux and Windows) system			
	calls.			

8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction and basic concepts. OS's definition, role, evolution, components, main concepts (file, process, system calls). Basic hardware aspects: CPU, user and kernel mode, memory layers, I/O devices. Basic OS structure.	2	 (1) use beamer slides, combined with blackboard illustration; 	
The Shell (Command Interpreter). Definition, role, functionality, simple and complex commands. Standard input and output redirection.	2	(2) interactions with students: ask their	
File systems (1). User Perspective. File and directory concept from the user point of view (definition, role, characteristics, operations).	2	opinion relative to the presented	
File systems (2). Windows and Linux File Systems. Permission rights and system calls.	2	subject;	
File systems (3). Implementation aspects. Implementation strategies overview, space management and related problems, hard and symbolic links.	2	 (3) give each class a short evaluation test; let students discuss 	
Process management. Process model: definition, role, characteristics. Linux and Windows process management system calls.	2	and argue each other their solution; give	

		them the good solution and let them evaluate their own one;	2	Thread management. Thread model: user vs. kernel threads, implementation problems, usage, performance aspects. Basic scheduling algorithms (FIFO, SJF, Priority-based). Linux and Windows process thread system calls.
		(4) propose 2-3 interesting study cases of OSes to be	2	Process synchronization (1). Theoretical aspects. Context, definition, synchronization mechanisms, techniques and problems (locks, semaphores, monitors, mutual exclusion, starvation, deadlock).
		prepared and presented by students;	2	Process synchronization (2). Classical synchronization patterns: producer/consumer, readers/writers, rendez-vous, barrier, dining philosopher, sleeping barber. Similarities between different synchronization mechanisms.
		(5) students are invited to collaborate	2	Inter-process communication. Pipe files, shared memory, message queues, signals.
		in research projects.	2	Memory management (1). Context, definition, binding, basic techniques, space management, addresses translation, swapping.
			2	Memory management (2). Paging and segmentation.
			2	I/O Devices Management. Principles, disks, clocks, character- oriented terminals.
			2	program's vulnerabilities (buffer overflow).

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

OS knowledge is a fundamental requirement in the CS field. We follow the ACM curricula guide. We also consult relevant IT companies about their practical expectations regarding OS knowledge and adapt accordingly our course contents. In this sense, Linux and Windows are the most used OSes. Usually the teachers in charge of lab classes are former graduate students of our CS program with consistent experience in industry. They are permanently consulted regarding the OS course curriculum and its applicability in real projects in industry.

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Students must understand fundamental OS concepts and be able to correctly define them. They must also be able to apply their knowledge to solve user-space problems related to or dependent by an OS.	Small problem-like subjects requiring students to apply the theoretical learned OS related aspects to give a solution to proposed problem.	0.67
Seminar	-	-	-
Laboratory	Students must be able to develop C programs that use different OS system calls to solve practical, problems related to or dependent by an OS.	Quiz tests. Programming problems, whose solution has to be implemented in C and run on computers.	0.33
Project	-	-	-

Minimum standard of performance

Students must attend minimum 9 lecture classes to be allowed to take the exam in the regular exam session. Students must attend minimum 7 lecture classes to be allowed to take the exam in any re-examination sessions. Less than 7 attended lecture classes leads to the interdiction to take any course re-examination in the university year the course is taught. Students must attend minimum 12 lab classes to be allowed to take the exam in any re-examination sessions. Less than 10 attended lab classes leads to the interdiction to take any lab re-examination in the university year the course is taught. Students are allowed to take the final course examination only after passing the lab examination.

Be able to define the fundamental OS principles and concepts, like process, thread, file, directory, lock, semaphore, paging. Be able to write C program to use fundamental system calls in Linux for working with files, processes, threads, synchronization mechanisms and memory.
