1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	44.

2. Data about the subject

2.1 Subject name	1 Subject name Computer networks						
2.2 Course responsible/lecturer			Prof. d	Prof. dr. eng. Vasile Dădârlat – vasile.dadarlat@cs.utcluj.ro			
2.3 Teachers in charge of seminars/ Assoc.prof. dr. eng. Peculea Adrian – Adrian.Pe			dr. eng. Peculea Adrian – Adrian.Peculea@cs.utcluj.ro				
laboratory/ project Lect. dr. eng. lancu Bogdan – B			g. lancu Bogdan – Bogdan.lancu@cs.utcluj.ro				
2.4 Year of study	IV	IV 2.5 Semester		1	2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E	
2.7 Subject estagen	DF –	DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară					
2.7 Subject category	DI – I	DI – Impusă, DOp – opțională, DFac – facultativă					

3. Estimated total time

3.1 Number of hours per week	4	of which:	Course	2	Seminars		Laboratory	2	Project	
3.2 Number of hours per semester	56	of which:	Course	28	Seminars		Laboratory	28	Project	
3.3 Individual study:										
(a) Manual, lecture material	and no	otes, biblio	graphy							40
(b) Supplementary study in t	he libra	ary, online	and in th	ne fiel	d					10
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays							20			
(d) Tutoring										
(e) Exams and tests							4			
(f) Other activities:										
3.4 Total hours of individual study (suma (3.3(a)3.3(f))) 74										
3.5 Total hours per semester (3.2+3.4)130										
3.6 Number of credit points					5					

4. Pre-requisites (where appropriate)

4.1 Curriculum	
4.2 Competence	Basic knowledge in programming languages (C, Java)
	Computer architecture, Operating systems

5. Requirements (where appropriate)

5.1. For the course	N/A
5.2. For the applications	Classroom, PC with internet access

6.1 Professional competences	C2: Designing hardware, software and communication components
	C2.1: Describing the structure and functioning of computational, communication
	and software components and systems
	C2.2: Explaining the role, interaction and functioning of hardware, software and
	communication components
	C2.3: Building the hardware and software components of some computing
	systems using algorithms, design methods, protocols, languages, data structures,
	and technologies
	C2.4: Evaluating the functional and non-functional characteristics of the

	computing systems using specific metrics C2.5: Implementing hardware, software and communication systems
6.2 Cross competences	N/A

7.1 General objective	Teamwork, working with partial and contradicting specifications
7.2 Specific objectives	Each student able to design LAN's software & hardware architecture

4. Pre-requisites (where appropriate)

4.1 Curriculum	Computer networks
4.3 Competence	Ability to analyze and design a local network using simulators available

5. Requirements (where appropriate)

5.1. For the course	Whiteboard, projector, computer
5.2. For the applications	Computers, software specific

6.1 Professional competences	C4 - Improving the performances of the hardware, software and communication systems (2 credits)				
	C4.1 - Identifying and describing the defining elements of the performances of				
	the hardware, software and communication systems				
	C4.2 - Explaining the interaction of the factors that determine the performances				
	of the hardware, software and communication systems				
	C4.3 - Applying the fundamental methods and principles for increasing the				
	performances of the hardware, software and communication systems				
	C4.4 - Choosing the criteria and evaluation methods of the performances of the				
	hardware, software and communication systems				

	C4.5 - Developing professional solutions for hardware, software and
	communication systems based on performance optimization
	C5 - Designing, managing the lifetime cycle, integrating and ensuring the integrity
	of hardware, software and communication systems (2 credits)
	C5.1 - Specifying the relevant criteria regarding the lifetime cycle, quality,
	security and the computing system's interaction with the environment and the
	human operator
	C5.2 - Using interdisciplinary knowledge for adapting the computing system to
	the specific requirements of the application field
	C5.3 - Using fundamental principles and methods for ensuring the security, the
	safety and ease of exploitation of the computing systems
	C5.4 - Proper utilization of the quality, safety and security standards in the field of
	information processing
	C5.5 - Creating a project including the problem's identification and analysis, its
	design and development, also proving an understanding of the basic quality
	requirements
	C6 - Designing intelligent systems (1 credit)
	C6.1 - Describing the components of intelligent systems
	C6.2 - Using domain-specific tools for explaining and understanding the
	functioning of intelligent systems
	C6.3 - Applying the fundamental methods and principles
	for specifying solutions for typical problems using intelligent systems
	C6.4 - Choosing the criteria and evaluation methods for the quality, performances
	and limitations of intelligent systems
	C6.5 - Developing and implementing professional projects for intelligent systems
6.2 Cross competences	N/A

7.1 General objective	Capacity to analyse, develop and implement distributed software systems
7.2 Specific objectives	-Capacity of designing distributed systems at both architectural and components'
	level by using the main concepts and paradigms of the domain as well as the
	capacity of understanding the relationships of the domain with other computer
	science areas.
	-Capacity of identifying the main models, techniques and technologies that could
	be used in the design of distributed systems by considering a set of functional
	and non-functional specifications and constraints
	-Capacity of developing and using service based technologies for designing
	distributed systems
	-Capacity of using Java and .NET, Spring, Angular JS and other Web technologies
	for designing distributed systems

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Distributed Systems is a subject of the domain "Computers and Information Technology".

It teaches students about the development and implementing of distributed software systems. The content was developed based on the analysis of similar disciplines from other universities as well as based on the requirements of the IT employees. The content was also evaluated by Romanian governmental agencies CNEAA and ARACIS.

	C5 Designing, managing the lifetime cycle, integrating and ensuring the integrity
	of hardware, software and communication systems (3 credits)
	C5.1 Specifying the relevant criteria regarding the lifetime cycle, quality, security and computing system's interaction with the environment and human operator
	C5.2 Using interdisciplinary knowledge for adapting the computing system to the specifc requirements of the application field
	C5.3 Using fundamental principles and methods for security, reliability and usability assurance of computing systems
	C5.4 Adequate utilization of quality, safety and security standards in information processing
	C5.5 Creating a project including the problem's identification and analysis, its
	design and development, also proving an understanding of the basic quality requirements
6.2 Cross competences	N/A

7.1 General objective	1. Students become aware of differences and similarities between parallel and distributed computing so the students understand the boundaries of both domains.
	2. Students become familiar with the principles of designing parallel programs.
	3. Students become familiar with the main classes of distributed algorithms.
7.2 Specific objectives	Parallel algorithms performance and scalability.
	Parallel algorithms design.
	Distributed algorithms: time synchronization, distributed mutual exclusion,
	causal ordering, leader election and snapshots.

8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction: goal, administrative issues, definition of parallel system and distributed systems.	2		
Performance and scalability: metrics, scalability definition, Amdahl's law.	2		
Parallel algorithm design: parallelization process, data dependency.	2		
Parallel algorithm design: case study: ocean simulation.	2		
Parallel algorithm design: decomposition techniques, mapping techniques for load balancing.	2		
Interconnection networks: static interconnection networks (metrics, topologies), dynamic interconnection networks (buses, crossbars, multistage networks).	2	Interactive lectures	
Dense matrix algorithms: matrix-vector multiplication (1D partitioning and 2D partitioning, comparison 1D to 2D), matrix-matrix multiplication (2D partitioning, Cannon algorithm).	2	using PPT presentations, exercises (at	
Time: physical clocks synchronization (Cristian algorithm, Berkeley algorithm, Network Time Protocol), logical clocks (Scalar time, Vector time, efficient implementation of vector clocks - Singhal- Kshemkalyani).	2	whiteboard) and questions addressed to the students.	
Distributed mutual exclusion: problem definition, Token-ring, Suzuki- Kasami, central coordinator, Lamport, Ricart-Agrawala.	2		
Causal ordering: problem definition, Birman-Schiper-Stephenson, Schiper-Eggli-Sandoz.	2		
Leader election: problem definition, general networks (FloodMax, OptFloodMax), synchronous / asynchronous ring (LeLann, Chang- Roberts, Hirschberg-Sinclair).	2		
Leader election: synchronous / asynchronous ring (Franklin, Peterson), anonymous ring (Itai-Rodeh).	2

4. Programming on parallel machines - GPU, multicore and clusters, N. Mathloff, University of California Davis, 2016, http://heather.cs.ucdavis.edu/~matloff/158/PLN/ParProcBook.pdf

*Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

As Cluj software workforce market gets more sophisticated, having solid knowledge of how to develop parallel programs and mastering the distributed computing are qualities that software companies look for.

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Formal assessment to test theoretical knowledge and problem solving skills. Attendance and activity.	Written exam.	40%
Seminar			
Laboratory	Formal assessment to test practical skills for	Project, Research report and	60%

	designing parallel and distributed solutions and implementation . Attendance and activity.	Homeworks during term.							
Project									
Minimum standard	J of performance:								
Design and implem	nentation of parallel/distributed solutions using	the theoretical models and tools (Op	enMP, MPI,						
PP.Net, Sockets,RMI).									
Pre-requisite for w	Pre-requisite for written exam: 6 mandatory lecture attendances.								
Grade calculus: 60% laboratory + 40% final exam									
Conditions for part	cicipating in the final exam: Laboratory \geq 5								
Conditions for promotion: grade \geq 5									

Course responsible S.I.dr.ing. Anca Hangan

1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	47.1

4. Pre-requisites (where appropriate)

4.1 Curriculum	Operating Systems
4.6 Competence	C programming; Define and use basic OS concepts and system calls

5. Requirements (where appropriate)

5.1. For the course	Blackboard / Whiteboard, Beamer											
5.2. For the applications	64-bit	Computers	with	hardware	virtualization	support,	64-bit	Linux	and			
	Windows, VMware Workstation, Blackboard / Whiteboard											

6.1 Professional competences	C5 : Designing, managing the lifetime cycle, integrating and ensuring the integrity
	of hardware, software and communication systems
	C5.1 : Specifying the relevant criteria regarding the lifetime cycle, quality, security
	and the computing system's interaction with the environment and the human
	operator
	C5.2 : Using interdisciplinary knowledge for adapting the computing system to the

	 specific requirements of the application field C5.3: Using fundamental principles and methods for ensuring the security, the safety and ease of exploitation of the computing systems C5.4: Proper utilization of the quality, safety and security standards in the field of information processing C5.5: Creating a project including the problem's identification and analysis, its design and development, also proving an understanding of the basic quality requirements
6.2 Cross competences	N/A

7.1 General objective	Provide the students a clear understanding of an OS' internal structure, its main								
	components' role and functionality, and the fundamental OS design and								
	implementation strategies.								
7.2 Specific objectives	Let the students:								
	1. Know and understand the possible OS internal structures.								
	2. Know and understand the possible design and implementation alternatives								
	of the main OS components, like the scheduler, process and thread								
	manager, memory manager etc.								
	3. Be able to analyze a specific OS design problems and find solutions to them.								
	4. Be able to implement in C or assembly different OS components and system								
	calls.								
	5. Be able to work in team and manage relatively complex software projects.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

OS knowledge is a fundamental requirement in the CS field. The OSD course presents techniques for hardware and software resources management, which are applicable on any complex management software application. Besides, it provides students detailed knowledge about modern OSes' internals, making them capable of developing more efficient applications. We follow the ACM curricula guide. OSD course's curriculum also maps the IT companies expectations, especially those dealing with direct access to OS services or developing kernel drivers or modules. Such companies are, for instance, system and data security and antivirus detection companies. Usually the teachers in charge of lab classes are former graduate students of our CS program with consistent experience in industry, in companies like those mentioned above. They are permanently consulted regarding the OS course curriculum and its applicability in real projects in industry.

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Students must understand fundamental OS	Oral examination. Detailed	0.67

	structure and design alternatives and be able to explicitly describe it. They must also be able to apply their knowledge to give solutions to specific OS design problems.	discussion about design alternatives of different OS components.	
Seminar			
Laboratory	Students must be able to develop different	Lab: implementation of different	
Project	OS components writing code in C and	problems in the lab OS.	0.22
	assembly.	Project: presentation of design	0.55
		and implementation solutions	

Minimum standard of performance:

Students must attend minimum **9 lecture classes** to be allowed to take the exam in the regular exam session. Students must attend minimum **7 lecture classes** to be allowed to take the exam in any re-examination sessions. Less than 7 attended lecture classes leads to the interdiction to take any course re-examination in the university year the course is taught.

Students must attend minimum **12 lab classes** to be allowed to take the exam in the regular exam session. Students must attend minimum **10 lab classes** to be allowed to take the exam in any re-examination sessions. Less than 10 attended lab classes leads to the interdiction to take any lab re-examination in the university year the course is taught.

Students are allowed to take the final course examination only after passing the lab examination.

Be able to describe the internal aspects of the fundamental OS design principles, like locks, priority-based and RR scheduling, system calls, paging, virtual memory.

Be able to write functional C code that pass at least one test from the provided test set.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

This discipline is integrated into the Computers and Information Technology domain. The content is classic, yet modern, and introduces to students the user centered methodology for the development of interactive software applications and graphical interfaces. The content of this discipline has been aligned with the information presented in similar disciplines from other major universities and companies from Romania, Europe and USA and has been evaluated by the authorized Romanian governmental agencies (CNEAA and ARACIS).

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

The subject is part of the Computer Science and Information Technology curriculum, its contents combining fundamental and practical aspects used in the field of pattern recognition. The subject content is correlated with the specific curricula of other Universities, in Romania and abroad, and is evaluated by government agencies (CNEAA and ARACIS). The subject's activities are meant to make the students familiar with the applications and the research directions of the image processing field, helped by the internationally renowned experience of the teachers.

	the hardware, software and communication systems

	C4.2 - Explaining the interaction of the factors that determine the performances
	of the hardware, software and communication systems
	C4.3 - Applying the fundamental methods and principles for increasing the
	performances of the hardware, software and communication systems
	C4.4 - Choosing the criteria and evaluation methods of the performances of the
	hardware, software and communication systems
	C4.5 - Developing professional solutions for hardware, software and
	communication systems based on performance optimization
	C5 - Designing, managing the lifetime cycle, integrating and ensuring the integrity
	of hardware, software and communication systems (2 credits)
	C5.1 - Specifying the relevant criteria regarding the lifetime cycle, quality,
	security and the computing system's interaction with the environment and the
	human operator
	C5.2 - Using interdisciplinary knowledge for adapting the computing system to
	the specific requirements of the application field
	C5.3 - Using fundamental principles and methods for ensuring the security, the
	safety and ease of exploitation of the computing systems
	C5.4 - Proper utilization of the guality, safety and security standards in the field of
	information processing
	C5.5 - Creating a project including the problem's identification and analysis, its
	design and development, also proving an understanding of the basic quality
	requirements
	C6 - Designing intelligent systems (1 credit)
	C6.1 - Describing the components of intelligent systems
	C6.2 - Using domain-specific tools for explaining and understanding the
	functioning of intelligent systems
	C6.3 - Applying the fundamental methods and principles
	for specifying solutions for typical problems using intelligent systems
	C6.4 - Choosing the criteria and evaluation methods for the quality, performances
	and limitations of intelligent systems
	C6.5 - Developing and implementing professional projects for intelligent systems
6.2 Cross competences	N/A

7.1 General objective	• To know the phases of programming language translators: lexical analysis,
	syntactic analysis, and code generation.
	To master the tree structure representation of XML documents.
7.2 Specific objectives	To know the classes of languages for which efficient translators and
	interpreters can be implemented.
	• To know the rules for processing typical statements for interpreters.
	• To understand the difference between structure and presentation of
	documents.
	• By using the Java language, to implement parsers of type SAX and DOM for
	XML documents containing DTD validation information.
	 By using the Java language, to implement XML document transformators, based on XSLT transformations.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

It is a specialty course in Computer Science, its syllabus being both classical and modern. It teaches the students with the principles of efficient design and implementation of interpreters and translators for artificial languages. The syllabus of the course has been discussed with other important universities and companies from Romania, Europe, and USA. This syllabus has been evaluated by Romanian governmental agencies (CNEAA and ARAIS).

4. Pre-requisites (where appropriate)

4.1 Curriculum	Not the case
4.10Competence	Not the case

5. Requirements (where appropriate)

5.1. For the course	The existence of multimedia equipment			
5.2. For the applications	Not the case			

6.1 Professional competences	C5 – Designing, managing the lifetime cycle, integrating and ensuring the
	integrity of hardware, software and communication systems (2 credits)
	C5.1 – Specifying the relevant criteria regarding the lifetime cycle, quality,
	security and computing system's interaction with the environment and human
	operator
	C5.2 – Using interdisciplinary knowledge for adapting the computing system to
	the specifc requirements of the application field
	C5.3 - Using fundamental principles and methods for ensuring the security, the
	safety and ease of exploitation of the computing systems
	C5.4 – Adequate utilization of quality, safety and security standards in

	information processing C5.5 – Realization of a project including problem identification and analysis, design and development, while proving the understanding of the basic quality needs and requirements
6.2 Cross competences	CT1 – Honorable, responsible, ethical behavior, in the spirit of the law, in order to ensure the professional reputation (1 credit)

7.1 General objective	Understand, assimilate and use of basic marketing concepts, principles and techniques
7.2 Specific objectives	Understand the marketing orientation, the components of the marketing mix, the methods and techniques for collecting and processing marketing data, the strategic analysis determining the competitive advantage, the market segmentation and the buying decision criteria.

9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

By completing this course, the course graduate is expected to have acquired a series of specific and general declarative and procedural knowledge, as well as have built a series of competencies, which, in their togetherness contribute to an increased capacity to find employment, communicate professionally and informally, collaborate and work closely with other professionals and non-professional, and an increased ability to promote and capitalize upon personal and professional traits and activities.

10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade		
Course	Standardized written test with multiple choice	Written test	60%		
	questions.	Duration: 1 hr.	40%		
	Collaborative and individual semester projects.	Individual portfolio			
	Collaborative and individual homework.				
	Assessment criteria include: accuracy/precision,				
	completeness, fluency, and relevance				
Seminar					
Laboratory					
Project					
Minimum standard of performance:					
The total weighed score exceeds the equivalent of 5/10 of the final grade.					
Each assessment exceeds 50% of the allotted grading.					

Course responsible DPsy. Dorin Stanciu PhD, Lecturer
