

## SYLLABUS

### 1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	44.

### 2. Data about the subject

2.1 Subject name	<b>Computer networks</b>				
2.2 Course responsible/lecturer	Prof. dr. eng. Vasile Dădârlat – vasile.dadarlat@cs.utcluj.ro				
2.3 Teachers in charge of seminars/ laboratory/ project	Assoc.prof. dr. eng. Peculea Adrian – Adrian.Peculea@cs.utcluj.ro Lect. dr. eng. Iancu Bogdan – Bogdan.Iancu@cs.utcluj.ro				
2.4 Year of study	IV	2.5 Semester	1	2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E
2.7 Subject category	<i>DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară</i>				DD
	<i>DI – Impusă, DOp – opțională, DFac – facultativă</i>				DI

### 3. Estimated total time

3.1 Number of hours per week	4	of which:	Course	2	Seminars		Laboratory	2	Project	
3.2 Number of hours per semester	56	of which:	Course	28	Seminars		Laboratory	28	Project	
3.3 Individual study:										
(a) Manual, lecture material and notes, bibliography									40	
(b) Supplementary study in the library, online and in the field									10	
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays									20	
(d) Tutoring										
(e) Exams and tests									4	
(f) Other activities:										
3.4 Total hours of individual study (suma (3.3(a)...3.3(f)))					74					
3.5 Total hours per semester (3.2+3.4)					130					
3.6 Number of credit points					5					

### 4. Pre-requisites (where appropriate)

4.1 Curriculum	
4.2 Competence	Basic knowledge in programming languages (C, Java) Computer architecture, Operating systems

### 5. Requirements (where appropriate)

5.1. For the course	N/A
5.2. For the applications	Classroom, PC with internet access

### 6. Specific competence

6.1 Professional competences	<p><b>C2:</b> Designing hardware, software and communication components</p> <p><b>C2.1:</b> Describing the structure and functioning of computational, communication and software components and systems</p> <p><b>C2.2:</b> Explaining the role, interaction and functioning of hardware, software and communication components</p> <p><b>C2.3:</b> Building the hardware and software components of some computing systems using algorithms, design methods, protocols, languages, data structures, and technologies</p> <p><b>C2.4:</b> Evaluating the functional and non-functional characteristics of the</p>
------------------------------	--

	computing systems using specific metrics <b>C2.5: Implementing hardware, software and communication systems</b>
6.2 Cross competences	N/A

### 7. Discipline objective (as results from the key competences gained)

7.1 General objective	Teamwork, working with partial and contradicting specifications
7.2 Specific objectives	Each student able to design LAN's software & hardware architecture

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction. Concepts, network types, characteristics, evolution, standards	2	Oral Presentations using multimedia means Q & A Interactive teaching	
ISO-OSI Reference model and Internet's TCP/IP protocol stack. OSI abstract model presentation, description of protocol functions for every layer. General presentation for TCP/IP protocol stack	2		
Data transmission techniques. Data transmission concepts, analog and digital transmission techniques, coding, communication channels	2		
Types of computer networks. Architectures, evolution, topologies, physical parameters	2		
Physical level. Transmission media, characteristics, performances, connectors, structured cabling system	2		
Medium access control. Medium access techniques for local (wired and wireless) and wide area networks	2		
Data Link level. Functions, problems, protocols, case study: HDLC	2		
Local Area Computer Networks. Fundamentals, architectures, evolution	2		
Local Area Computer Networks. Systems, performances	2		
Computer Networks Interconnection. Devices for network interconnection; presentation of bridges, switches and routers	2		
Internet access. IP (+ ICMP), IPv6 (+IGMP) protocols. Address resolution protocol. Routing protocols	2		
Transport level protocols. TCP protocol; congestion control. TCP and UDP sockets	2		
General introduction to Internet applications. File transfer. Electronic mail, multimedia transmissions, network management	2		
General introduction to Internet applications. Security issues	2		
Bibliography			
1. V.Dadarlat, E.Cebuc - Rețele Locale de Calculatoare - de la cablare la interconectare, Editura Albastra (Microinformatica), Cluj, 2006, ISBN 973-650-161-2			
2. W. Stallings, <i>Data and Computer Communications</i> ; Prentice Hall , 2004-2014			
3. A. Tanenbaum – <i>Computer Networks</i> , Prentice Hall, 2005- 2010 (A. S. Tanenbaum, <i>Rețele de Calculatoare</i> ; Agora Press)			
8.2 Applications – Seminars/Laboratory/Project	Hours	Teaching methods	Notes
Cooper based transmission media and UTP cabling	2	Practical exercises Brief presentation of possible solutions Self testing programmes	
Optical fibers and components	2		
Structured Cabling	2		
Medium Access Methods	2		
Connectivity to Network: IPv4 subnets and basic router configuration	2		
Connectivity to Network: DHCP and IPv4 static routing	2		
Connectivity to Network: IPv6 introduction and static routing	2		
Transport layer: TCP/UDP and Network Programming using Socket	2		
Wireshark – network analysis	2		
VLAN and inter-VLAN routing	2		
Wireless LAN	2		
Spanning-tree protocol	2		
Port link aggregation: Etherchannel	2		
Lab exam	2		

## Bibliography

Notes & lab notes available at: <ftp.utcluj.ro>

4. <https://moodle.cs.utcluj.ro/>

*\*Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.*

## 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Course content is kept state of the art by using latest protocols and devices available on the market.

## 10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Interactivity and initial preparation, intermediary and final written examinations	Written exam (2,5 h).	70%
Seminar			
Laboratory	Quality of practical work, participation	Continuous assessment, final written colloquium	30%
Project			

Minimum standard of performance:  
Grade calculus: 30% laboratory + 70% final exam  
Conditions for participating in the final exam: Laboratory  $\geq 5$   
Conditions for promotion: grade  $\geq 5$

Course responsible  
Prof. dr. eng. Vasile Dădârlat

Head of department  
Prof.dr.eng. Rodica Potolea

### 1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	45.

### 2. Data about the subject

2.1 Subject name	<b><i>Distributed systems</i></b>				
2.2 Course responsible/lecturer	Prof. dr. eng. Ioan Salomie – <a href="mailto:Ioan.Salomie@cs.utcluj.ro">Ioan.Salomie@cs.utcluj.ro</a>				
2.3 Teachers in charge of seminars/ laboratory/ project	Assoc.prof.dr.Eng. Tudor Cioara, Assoc.prof.dr. Eng. Ionut Anghel, S.I.dr.eng. Marcel Antal, As. Drd. Claudia Pop, As. Drd. Dorin Moldovan				
2.4 Year of study	IV	2.5 Semester	1	2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E
2.7 Subject category	DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară				DS
	DI – Impusă, DOp – opțională, DFac – facultativă				DI

### 3. Estimated total time

3.1 Number of hours per week	5	of which:	Course	2	Seminars		Laboratory	2	Project	1
3.2 Number of hours per semester	70	of which:	Course	28	Seminars		Laboratory	28	Project	14
3.3 Individual study:										
(a) Manual, lecture material and notes, bibliography										18
(b) Supplementary study in the library, online and in the field										6
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays										24
(d) Tutoring										
(e) Exams and tests										12
(f) Other activities:										
3.4 Total hours of individual study (suma (3.3(a)...3.3(f)))										60
3.5 Total hours per semester (3.2+3.4)										130
3.6 Number of credit points										5

### 4. Pre-requisites (where appropriate)

4.1 Curriculum	Computer networks
4.3 Competence	Ability to analyze and design a local network using simulators available Ability to design an application using layered architectures Ability to code using OOP languages. Ability to design and implement a relational database and write SQL queries.

### 5. Requirements (where appropriate)

5.1. For the course	Whiteboard, projector, computer
5.2. For the applications	Computers, software specific

### 6. Specific competence

6.1 Professional competences	<b>C4</b> - Improving the performances of the hardware, software and communication systems (2 credits) <b>C4.1</b> - Identifying and describing the defining elements of the performances of the hardware, software and communication systems <b>C4.2</b> - Explaining the interaction of the factors that determine the performances of the hardware, software and communication systems <b>C4.3</b> - Applying the fundamental methods and principles for increasing the
------------------------------	---

	<p>performances of the hardware, software and communication systems</p> <p><b>C4.4</b> - Choosing the criteria and evaluation methods of the performances of the hardware, software and communication systems</p> <p><b>C4.5</b> - Developing professional solutions for hardware, software and communication systems based on performance optimization</p> <p><b>C5</b> - Designing, managing the lifetime cycle, integrating and ensuring the integrity of hardware, software and communication systems (2 credits)</p> <p><b>C5.1</b> - Specifying the relevant criteria regarding the lifetime cycle, quality, security and the computing system's interaction with the environment and the human operator</p> <p><b>C5.2</b> - Using interdisciplinary knowledge for adapting the computing system to the specific requirements of the application field</p> <p><b>C5.3</b> - Using fundamental principles and methods for ensuring the security, the safety and ease of exploitation of the computing systems</p> <p><b>C5.4</b> - Proper utilization of the quality, safety and security standards in the field of information processing</p> <p><b>C5.5</b> - Creating a project including the problem's identification and analysis, its design and development, also proving an understanding of the basic quality requirements</p> <p><b>C6</b> - Designing intelligent systems (1 credit)</p> <p><b>C6.1</b> - Describing the components of intelligent systems</p> <p><b>C6.2</b> - Using domain-specific tools for explaining and understanding the functioning of intelligent systems</p> <p><b>C6.3</b> - Applying the fundamental methods and principles for specifying solutions for typical problems using intelligent systems</p> <p><b>C6.4</b> - Choosing the criteria and evaluation methods for the quality, performances and limitations of intelligent systems</p> <p><b>C6.5</b> - Developing and implementing professional projects for intelligent systems</p>
6.2 Cross competences	N/A

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	Capacity to analyse, develop and implement distributed software systems
7.2 Specific objectives	<ul style="list-style-type: none"> <li>-Capacity of designing distributed systems at both architectural and components' level by using the main concepts and paradigms of the domain as well as the capacity of understanding the relationships of the domain with other computer science areas.</li> <li>-Capacity of identifying the main models, techniques and technologies that could be used in the design of distributed systems by considering a set of functional and non-functional specifications and constraints</li> <li>-Capacity of developing and using service based technologies for designing distributed systems</li> <li>- Capacity of using Java si .NET technologies for designing distributed systems.</li> <li>- Capacity of using Web service technologies – XML, SOAP, WSDL, UDDI and REST</li> <li>- Capacity of developing Web services using Java and.NET. technologies</li> <li>- Capacity to develop client applications for distributed systems using Javascript based technologies</li> <li>-Capacity to design and develop platforms for distributed app deployment considering the involved servers and network settings</li> </ul>

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction – Characterization of Distributed Systems	2	-Using modern multimedia teaching methods and direct access to internet;	
Distributed System Models, Architectures and Middleware	2		
Non-Functional Requirements, QoS, Metrics	2		
Inter-process Communication, Message passing, Sockets	2		

Distributed Computation Model, Time and Causality, Logic Clocks	2	-Challenging questions during lecturers -Students are invited to collaborate in research projects -Personal assistance hours during the semester and before the exam	
Global States, Snapshots, Distributed Algorithms	2		
Distributed Data Processing – Concepts , Reference Architectures	2		
RPC, RMI, XML RPC, gRPC, SOA	2		
Distributed Data Processing, Data Distribution Techniques	2		
Distributed Transactions and Concurrency Control	2		
Error handling in distributed systems	2		
SOA and Web Services	2		
Cloud Computing and Systems	2		
IoT, Cyber-Physical Systems, Adaptive Systems, P2P Systems	2

### 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

Distributed Systems is a subject of the domain "Computers and Information Technology". It teaches students about the development and implementing of distributed software systems. The content was developed based on the analysis of similar disciplines from other universities as well as based on the requirements of the IT employees. The content was also evaluated by Romanian governmental agencies CNEAA and ARACIS.

### 10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	The level of assimilation of the knowledge about distributed systems, teacher during the course	Written Exam	55%
Seminar			
Laboratory	-Capacity of designing distributed systems at both architectural and components' level by using the main concepts and paradigms of the domain as well as the capacity of understanding the relationships of the domain with other computer science areas.	Assignments evaluation, Project evaluation	30%
Project			

	<ul style="list-style-type: none"> <li>-Capacity of identifying the main models, techniques and technologies that could be used in the design of distributed systems by considering a set of functional and non-functional specifications and constraints</li> <li>-Individual activity during course, lab and project</li> <li>-Attendance</li> </ul>		
<p>Minimum standard of performance:  - To be able to design and implement distributed software systems.  Grade calculus: 30% laboratory + 15% project + 55% final exam  Conditions for participating in the final exam: Laboratory <math>\geq</math> 5, Project <math>\geq</math>5  Handing over all laboratory assignments and obtain a minimum grade of 5 on each assignment; At least 11 laboratory presences  Conditions for promotion: final exam <math>\geq</math> 5  Obtain a minimum grade of 5 for each category of exam questions (theory, technologies and problem)</p>

	<p>software and communication systems</p> <p><b>C4.5</b> Developing professional solutions for hardware, software and communication systems based on performance optimization</p> <p><b>C5</b> Designing, managing the lifetime cycle, integrating and ensuring the integrity of hardware, software and communication systems (3 credits)</p> <p><b>C5.1</b> Specifying the relevant criteria regarding the lifetime cycle, quality, security and computing system's interaction with the environment and human operator</p> <p><b>C5.2</b> Using interdisciplinary knowledge for adapting the computing system to the specific requirements of the application field</p> <p><b>C5.3</b> Using fundamental principles and methods for security, reliability and usability assurance of computing systems</p> <p><b>C5.4</b> Adequate utilization of quality, safety and security standards in information processing</p> <p><b>C5.5</b> Creating a project including the problem's identification and analysis, its design and development, also proving an understanding of the basic quality requirements</p>
6.2 Cross competences	N/A

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	<ol style="list-style-type: none"> <li>1. Students become aware of differences and similarities between parallel and distributed computing so the students understand the boundaries of both domains.</li> <li>2. Students become familiar with the principles of designing parallel programs.</li> <li>3. Students become familiar with the main classes of distributed algorithms.</li> </ol>
7.2 Specific objectives	<p>Parallel algorithms performance and scalability.</p> <p>Parallel algorithms design.</p> <p>Distributed algorithms: time synchronization, distributed mutual exclusion, causal ordering, leader election and snapshots.</p>

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Introduction: goal, administrative issues, parallel vs distributed computing.	2	Interactive lectures using PPT presentations and exercises (at whiteboard).	
Parallel computing basics: computer architectures and programming models.	2		
Parallel algorithm design: parallelization process, data dependency.	2		
Parallel algorithm design: case study - ocean simulation.	2		
Parallel algorithm design: decomposition and mapping techniques.	2		
Improving the performance of parallel programs: load balancing issues.	2		
Improving the performance of parallel programs: serialization and communication issues.	2		
Workload-driven evaluation of parallel systems.	2		
Cache coherence in symmetric multiprocessors.	2		
Parallel computing on distributed resources: Grid computing vs Hadoop.	2		
Time: physical clocks synchronization (Cristian algorithm, Berkeley algorithm, Network Time Protocol), logical clocks (Scalar time, Vector time, efficient implementation of vector clocks - Singhal-Kshemkalyani).	2		
Causal ordering: problem definition, Birman-Schiper-Stephenson, Schiper-Eggl-Sandoz.	2		
Leader election: problem definition, general networks (FloodMax, OptFloodMax), synchronous / asynchronous ring (LeLann, Chang-Roberts, Hirschberg-Sinclair).	2		
Leader election: synchronous / asynchronous ring (Franklin, Peterson), anonymous ring (Itai-Rodeh).	2

**9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field**

As Cluj software workforce market gets more sophisticated, having solid knowledge of how to develop parallel programs and mastering the distributed computing are qualities that software companies look for.

**10. Evaluation**

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Formal assessment to test theoretical knowledge and problem solving skills. Attendance and activity.	Assignments and written exam.	60%
Laboratory	Formal assessment to test practical skills for designing parallel and distributed solutions and implementation . Attendance and activity.	Assignments and tests.	40%
Minimum standard of performance: Design and implementation of parallel/distributed solutions using the theoretical models and tools (MPI, Condor grid middleware). Pre-requisite for written exam: 6 mandatory lecture attendances. Grade calculus: 40% laboratory + 10%course assignments+50% final exam Conditions for participating in the final exam: Laboratory ≥ 5 Conditions for promotion: grade ≥ 5

6.2 Cross competences	N/A

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	Provide the students a clear understanding of an OS' internal structure, its main components' role and functionality, and the fundamental OS design and implementation strategies.
7.2 Specific objectives	<p>Let the students:</p> <ol style="list-style-type: none"> <li>1. Know and understand the possible OS internal structures.</li> <li>2. Know and understand the possible design and implementation alternatives of the main OS components, like the scheduler, process and thread manager, memory manager etc.</li> <li>3. Be able to analyze a specific OS design problems and find solutions to them.</li> <li>4. Be able to implement in C or assembly different OS components and system calls.</li> <li>5. Be able to work in team and manage relatively complex software projects.</li> </ol>

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
<b>General structure of an OS.</b> Possible OS structures (monolithic, layered, micro-kernel, virtual machine, exokernel), its components, their functionality, role, interconnectivity.	2	(1) use beamer slides, combined with blackboard illustration;	
<b>Process and thread management (1).</b> Scheduling algorithms. FCFS, SJF, Priority-based, Lottery. Priority inversion.	2		
<b>Process and thread management (2).</b> Scheduling algorithms: RR, MLFQ. Use cases: Solaris, Windows and Linux scheduling policies.	2	(2) interactions with students: ask their opinion relative to the presented subject;	
<b>Synchronization mechanisms (1).</b> General Design Principles. Hardware mechanisms used for implementation of higher-level synchronization mechanisms. Design and implementation of locks, semaphores, condition variables. Deadlock avoidance.	2		
<b>Synchronization mechanisms (2).</b> Linux and Windows Use Cases. The synchronization mechanisms provided by Linux and Windows. The way they are implemented.	2		
<b>Synchronization mechanisms (3).</b> Deadlock. Deadlock avoidance, prevention and detection algorithms.	2	(3) give each class a short evaluation test; let students discuss and argue each other their solution; give them the good solution and let them evaluate their own one;	
<b>Process management (1).</b> Definition of the process concept, system call mechanism and possible implementations, handle (file descriptor) management, basic system calls for process management.	2		
<b>Process management (2).</b> Process memory address space structure, argument passing on the stack, process creation strategies, multi-threading support.	2	(4) propose 2-3 interesting study cases of OSES to be prepared and presented by students;	
<b>Memory management (1).</b> General aspects, design and implementation alternatives of different memory management techniques and mechanisms: contiguous allocation, segmentation, and paging.	2		
<b>Memory management (2).</b> Paging specific problems like page table hierarchical structure, memory sharing, page tables for Intel	2	(5) students are invited to collaborate in research projects.	

architecture.			
<b>Memory management (3).</b> Virtual memory's design and implementation aspects: swapping and lazy loading. Page replacement algorithms.	2		
<b>File systems (1).</b> General Design Aspects. Design and implementation alternatives of file systems concepts (files, directories), storage space management. Advantages and disadvantages.	2		
<b>File systems (2).</b> Linux and Windows File Systems. Design and implementation of Ext2 and NTFS.	2		
<b>Security aspect. Subject review.</b> Basic security aspects design. Overview of all presented subjects.	2

8.2 Applications – Seminars/Laboratory/Project	Hours	Teaching methods	Notes
<b>Introduction.</b> Presentation of the lab / project OS (Pintos or HAL9000).		(1) students are presented a very brief overview of the most important and difficult aspects of the working subject; (2) students are given at the beginning of each class a short evaluation quiz; (3) students are given a hands-on tutorial to practice with working subject's aspects and to solve problems (4) students are given challenging problems for extra credit;	
<b>OS Debugging.</b> Techniques and tools to debug an OS.			
<i>Thread management. Support for managing multiple executions inside the OS kernel.</i>			
<i>Synchronization mechanisms. Implementation of locks, semaphores and condition variables.</i>			
<b>Scheduling algorithms.</b> Round-Robin, priority-based, multi-level feedback queue (MLFQ).			
<b>User application support (1). System call mechanism.</b> Learn the way the system calls are implemented and used. Basic system call handling in the OS kernel.			
<b>User application support (2).</b> Basic memory management. Implementation of basic system calls.			
<b>User application support (3).</b> Multi-threaded application support.			
<b>Virtual memory (1).</b> Lazy-loading mechanisms.			
<b>Virtual memory (2).</b> Memory-mapped files.			
<b>Virtual memory (3).</b> Swapping and page-replacement algorithms.			
<b>File system (1).</b> Basic aspects of file implementation.			
<b>File system (2).</b> Basic aspects of directory implementation.			
<b>Lab examination.</b>

### 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

OS knowledge is a fundamental requirement in the CS field. The OSD course presents techniques for hardware and software resources management, which are applicable on any complex management software application. Besides, it provides students detailed knowledge about modern OSes' internals, making them capable of developing more efficient applications. We follow the ACM curricula guide. OSD course's curriculum also maps the IT companies expectations, especially those dealing with direct access to OS services or developing kernel drivers or modules. Such companies are, for instance, system and data security and antivirus detection companies. Usually the teachers in charge of lab classes are former graduate students of our CS program with consistent experience in industry, in companies like those mentioned above. They are permanently consulted regarding the OS course curriculum and its applicability in real projects in industry.

## 10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Students must understand fundamental OS structure and design alternatives and be able to explicitly describe it. They must also be able to apply their knowledge to give solutions to specific OS design problems.	Oral examination. Detailed discussion about design alternatives of different OS components.	0.67
Seminar			
Laboratory	Students must be able to develop different OS components writing code in C and assembly.	<i>Lab</i> : implementation of different problems in the lab OS. <i>Project</i> : presentation of design and implementation solutions	0.33
Project			
<p>Minimum standard of performance:</p> <p>Students must attend minimum <b>9 lecture classes</b> to be allowed to take the exam in the regular exam session. Students must attend minimum <b>7 lecture classes</b> to be allowed to take the exam in any re-examination sessions. Less than 7 attended lecture classes leads to the interdiction to take any course re-examination in the university year the course is taught.</p> <p>Students must attend minimum <b>12 lab classes</b> to be allowed to take the exam in the regular exam session. Students must attend minimum <b>10 lab classes</b> to be allowed to take the exam in any re-examination sessions. Less than 10 attended lab classes leads to the interdiction to take any lab re-examination in the university year the course is taught.</p> <p>Students must submit solutions for <b>at least 3 project assignments</b> (from the total no of 6 assignments) and receive at least 5 for each submitted assignment.</p> <p>Students are allowed to take the final course examination only after passing the lab and project examination.</p> <p>Be able to describe the internal aspects of the fundamental OS design principles, like locks, priority-based and RR scheduling, system calls, paging, virtual memory.</p> <p>Be able to write functional C code that pass at least one test from the provided test set.</p>

### 9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field

This discipline is integrated into the Computers and Information Technology domain. The content is classic, yet modern, and introduces to students the user centered methodology for the development of interactive software applications and graphical interfaces. The content of this discipline has been aligned with the information presented in similar disciplines from other major universities and companies from Romania, Europe and USA and has been evaluated by the authorized Romanian governmental agencies (CNEAA and ARACIS).

### 10. Evaluation

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	The written exam evaluates the understanding of the information presented in classes and the ability to apply this knowledge.	Evaluation is performed through written examination.	60% (E)
	The activity in class evaluates the active involvement of the students in the teaching process and their participation to the discussions, debates and other class activities during the entire semester.	Evaluation is performed through a very short tests.	10% (AC)
Laboratory	Laboratory assessment evaluates the practical abilities obtained by the students. Through project assignments the students have the opportunity to develop their skill in applying the notions, concepts and methods presented in class.	Evaluation is performed through written exam and project assessment.	25% (C)
Project			25% (P)
Minimum standard of performance: Graduation requirement: $M \geq 5$ , final mark $M = 0.4 * E + 0.25 * C + 0.25 * P + 0.1 * AC$

**9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field**

The subject is part of the Computer Science and Information Technology curriculum, its contents combining fundamental and practical aspects used in the field of pattern recognition. The subject content is correlated with the specific curricula of other Universities, in Romania and abroad, and is evaluated by government agencies (CNEAA and ARACIS). The subject's activities are meant to make the students familiar with the applications and the research directions of the image processing field, helped by the internationally renowned experience of the teachers.

**10. Evaluation**

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Testing the theoretical knowledge acquired, and the practical abilities of problem solving.	Written exam	50%
Seminar			
Laboratory	Testing the practical abilities of designing and implementing solutions to specific problems. Attendance and activity.	Lab assessment, project assessment	50%
Project			
Minimum standard of performance: Modeling and implementation of solutions to specific engineering problems, using the domain's formal apparatus. Grade calculus: 25% laboratory + 25% project + 50% final exam Conditions for participating in the final exam: Laboratory ≥ 5, project ≥ 5 Conditions for promotion: grade ≥ 5			

Course responsible  
Prof. dr. eng. Sergiu Nedevschi

Head of department  
Prof.dr.eng. Rodica Potolea

## SYLLABUS

### 1. Data about the program of study

1.1 Institution	The Technical University of Cluj-Napoca
1.2 Faculty	Faculty of Automation and Computer Science
1.3 Department	Computer Science
1.4 Field of study	Computer Science and Information Technology
1.5 Cycle of study	Bachelor of Science
1.6 Program of study/Qualification	Computer science/ Engineer
1.7 Form of education	Full time
1.8 Subject code	48.2

### 2. Data about the subject

2.1 Subject name	<b>Translators design</b>				
2.2 Course responsible/lecturer	Assoc.prof. dr. eng. Emil Șt. Chifu – <a href="mailto:emil.chifu@cs.utcluj.ro">emil.chifu@cs.utcluj.ro</a>				
2.3 Teachers in charge of seminars/ laboratory/ project	Ing. Mihai Anton Cerghizan				
2.4 Year of study	IV	2.5 Semester	1	2.6 Type of assessment (E - exam, C - colloquium, V - verification)	E
2.7 Subject category	DF – fundamentală, DD – în domeniu, DS – de specialitate, DC – complementară				DS
	DI – Impusă, DOp – opțională, DFac – facultativă				DOp

### 3. Estimated total time

3.1 Number of hours per week	5	of which:	Course	2	Seminars		Laboratory	2	Project	1
3.2 Number of hours per semester	70	of which:	Course	28	Seminars		Laboratory	28	Project	14
3.3 Individual study:										
(a) Manual, lecture material and notes, bibliography										30
(b) Supplementary study in the library, online and in the field										15
(c) Preparation for seminars/laboratory works, homework, reports, portfolios, essays										27
(d) Tutoring										10
(e) Exams and tests										3
(f) Other activities:										0
3.4 Total hours of individual study (suma (3.3(a)...3.3(f)))							85			
3.5 Total hours per semester (3.2+3.4)							155			
3.6 Number of credit points							6			

### 4. Pre-requisites (where appropriate)

4.1 Curriculum	Formal Languages and Translators, Computer Programming, Data Structures and Algorithms
4.9 Competence	<ul style="list-style-type: none"> <li>- Basic knowledge of programming and data structures (preferably in the C and Java languages)</li> <li>- Concepts of generative grammars and formal languages</li> <li>- To know the basic principles in the design of interpreters and translators for languages artificial</li> <li>- Basic knowledge of relational databases and web applications</li> </ul>

### 5. Requirements (where appropriate)

5.1. For the course	N/A
5.2. For the applications	Computers, specific software

### 6. Specific competence

6.1 Professional competences	<p><b>C4</b> - Improving the performances of the hardware, software and communication systems (2 credits)</p> <p><b>C4.1</b> - Identifying and describing the defining elements of the performances of the hardware, software and communication systems</p>
------------------------------	---

	<p><b>C4.2</b> - Explaining the interaction of the factors that determine the performances of the hardware, software and communication systems</p> <p><b>C4.3</b> - Applying the fundamental methods and principles for increasing the performances of the hardware, software and communication systems</p> <p><b>C4.4</b> - Choosing the criteria and evaluation methods of the performances of the hardware, software and communication systems</p> <p><b>C4.5</b> - Developing professional solutions for hardware, software and communication systems based on performance optimization</p> <p><b>C5</b> - Designing, managing the lifetime cycle, integrating and ensuring the integrity of hardware, software and communication systems (2 credits)</p> <p><b>C5.1</b> - Specifying the relevant criteria regarding the lifetime cycle, quality, security and the computing system's interaction with the environment and the human operator</p> <p><b>C5.2</b> - Using interdisciplinary knowledge for adapting the computing system to the specific requirements of the application field</p> <p><b>C5.3</b> - Using fundamental principles and methods for ensuring the security, the safety and ease of exploitation of the computing systems</p> <p><b>C5.4</b> - Proper utilization of the quality, safety and security standards in the field of information processing</p> <p><b>C5.5</b> - Creating a project including the problem's identification and analysis, its design and development, also proving an understanding of the basic quality requirements</p> <p><b>C6</b> - Designing intelligent systems (1 credit)</p> <p><b>C6.1</b> - Describing the components of intelligent systems</p> <p><b>C6.2</b> - Using domain-specific tools for explaining and understanding the functioning of intelligent systems</p> <p><b>C6.3</b> - Applying the fundamental methods and principles for specifying solutions for typical problems using intelligent systems</p> <p><b>C6.4</b> - Choosing the criteria and evaluation methods for the quality, performances and limitations of intelligent systems</p> <p><b>C6.5</b> - Developing and implementing professional projects for intelligent systems</p>
6.2 Cross competences	N/A

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	<ul style="list-style-type: none"> <li>To know the phases of programming language translators: lexical analysis, syntactic analysis, and code generation.</li> <li>To master the tree structure representation of XML documents.</li> </ul>
7.2 Specific objectives	<ul style="list-style-type: none"> <li>To know the classes of languages for which efficient translators and interpreters can be implemented.</li> <li>To know the rules for processing typical statements for interpreters.</li> <li>To understand the difference between structure and presentation of documents.</li> <li>By using the Java language, to implement parsers of type SAX and DOM for XML documents containing DTD validation information.</li> <li>By using the Java language, to implement XML document transformers, based on XSLT transformations.</li> </ul>

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Descriptive tools: extended Backus-Naur form.	2	- The main ideas with multimedia techniques - Details and examples at the blackboard, in interaction with the students	
Regular grammars and finite automata: finite automata, state diagrams and regular expressions.	2		
Context-free grammars and pushdown automata: examples.	2		
Lexical analysis: modules and interfaces (decomposition of the grammar, lexical analyzer interface), construction of the lexical	2		

analyzer (state diagrams, reserved words method).		- There are consultation hours - Students are invited to collaborate in research projects		
LL parsers: the LL(1) parsing algorithm for extended BNF grammars.	2			
LL parsers: computation of FIRST and FOLLOW sets.	2			
LL parsers: examples of recursive-descent applications.	2			
Theoretical results concerning the LL(k) and LR(k) grammars.	2			
LR parsers: LR(0) states, SLR(1) grammars.	2			
LR parsers: LALR(1) grammars.	2			
LR parsers: the LALR(1) algorithm.	2			
LR parsers: shift-reduce transitions, chain production elimination.	2			
LR parsers: LR table compression.	2			
Basic concepts of attribute grammars.	2

8.2 Applications – Seminars/Laboratory/Project		Hours	Teaching methods	Notes
<b>Laboratory</b>				
W3C XML Recommendation version 1.0.	2	Brief presentation at the blackboard, examples and exercises implemented and tested on the computers, followed by homework for each topic		
Parsing XML documents (“well-formed”).	2			
XML document validation using DTD.	2			
XML document validation using XSD.	2			
W3C XPath Recommendation version 1.0.	2			
W3C XSLT Recommendation version 1.0.	2			
XSL-FO (XML Stylesheet Language - Formatting Objects) 1.1.	2			
XML usage for storing Microsoft Office 2007/2010 documents - Apache POI/XSSF 3.13.	2			
XML Data Binding using JAXB 2.0.	2			
W3C XQuery Recommendation 1.0, XPath & XSLT 2.0.	2			
XML document storage in databases.	2			
eXist-db XML native DBMS 2.2.	2			
XQuery 3.0 and Update extensions in eXist-db	2			
XRX (XForms + REST(ful) + XQuery) Web Application Architecture & Development in eXist-db.	2			
<b>Project</b>				
Building recursive-descent parsers from extended BNF grammars.	2	Brief presentation at the blackboard, implementing and testing the assignment on the computer		
Recursive-descent (RD) applications: expression evaluator.	2			
RD applications: interpreter for a language operating on binary trees.	2			
RD applications: interpreter for a language operating on lists.	2			
RD applications: interpreter for a language operating on matrices.	2			
RD applications: code generator for an imperative language.	2			
RD test.	2

\*Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.

**9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field**

It is a specialty course in Computer Science, its syllabus being both classical and modern. It teaches the students with the principles of efficient design and implementation of interpreters and translators for artificial languages. The syllabus of the course has been discussed with other important universities and companies from Romania, Europe, and USA. This syllabus has been evaluated by Romanian governmental agencies (CNEAA and ARAIS).

**10. Evaluation**

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	- Problem-solving skills - Attendance, Activity	- Written exam	44%
Seminar			
Laboratory	- Problem-solving skills	- Assessment of the XML activity, homework, and written exam	35%
Project	- Attendance, Activity	- Assessment of the RD activity and test	21%
Minimum standard of performance: Modelling typical engineering problems using the domain specific formal apparatus. Grade calculus: 35% lab + 21% project + 44% final exam Conditions for participating in the final exam: Lab $\geq$ 5 Conditions for promotion: grade $\geq$ 5			

Course responsible

### 4. Pre-requisites (where appropriate)

4.1 Curriculum	Not the case
4.10 Competence	Not the case

### 5. Requirements (where appropriate)

5.1. For the course	The existence of multimedia equipment
5.2. For the applications	Not the case

### 6. Specific competence

6.1 Professional competences	<p><b>C5</b> – Designing, managing the lifetime cycle, integrating and ensuring the integrity of hardware, software and communication systems (2 credits)</p> <p><b>C5.1</b> – Specifying the relevant criteria regarding the lifetime cycle, quality, security and computing system's interaction with the environment and human operator</p> <p><b>C5.2</b> – Using interdisciplinary knowledge for adapting the computing system to the specific requirements of the application field</p> <p><b>C5.3</b> - Using fundamental principles and methods for ensuring the security, the safety and ease of exploitation of the computing systems</p> <p><b>C5.4</b> – Adequate utilization of quality, safety and security standards in</p>
------------------------------	--

	information processing <b>C5.5</b> – Realization of a project including problem identification and analysis, design and development, while proving the understanding of the basic quality needs and requirements
6.2 Cross competences	<b>CT1</b> – Honorable, responsible, ethical behavior, in the spirit of the law, in order to ensure the professional reputation (1 credit)

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	Understand, assimilate and use of basic marketing concepts, principles and techniques
7.2 Specific objectives	Understand the marketing orientation, the components of the marketing mix, the methods and techniques for collecting and processing marketing data, the strategic analysis determining the competitive advantage, the market segmentation and the buying decision criteria.

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Marketing role in big and small companies and in society: to contribute to company prosperity through creating a high value for the customers; to make the company responsible on the long range in front of community, society and environment. Marketing specific activities	2	multimedia presentation, interactivity by exemplifying the presented concepts, using the questions-answer method during the course, discussing case studies, playing thematic strategy game, interactive lectures	
Marketing concepts (philosophies) in contemporary organizations: Volume? Quality? Sales? Customer satisfaction?	2		
Marketing environment analysis. Micro and macro environment: suppliers, interest groups, customers, economic, demographic, technological, natural, legal and cultural environment	2		
Marketing research: research plan, data collection; data analysis quantitative and qualitative techniques; experiments; research report. Marketing information systems	2		
Marketing strategic planning: creating and maintaining the balance between objectives, resources and market opportunities. Methods of strategic analysis.	2		
Designing the strategic plan at four levels: company, divisions, strategic units and brands	2		
Consumer behavior analysis: patterns of behavior	2		
Buying decision process	2		
Market segmentation. Criteria and methods of market segmentation	2		
Product policy. Product life cycle. Researching and developing new products	2		
Product strategies for the life cycle stages. Positioning strategies	2		
Pricing. Pricing policy objectives. Pricing and legal constraints. Pricing policies: market penetration and market skimming	2		
Product distribution. Choosing the distribution channels. Managing and controlling the distribution channels	2		
Marketing communication. Communication process. Marketing communication mix: advertising,	2

(d) Tutoring										-
(e) Exams and tests										4
(f) Other activities:										-
3.4 Total hours of individual study (suma (3.3(a)...3.3(f)))										48
3.5 Total hours per semester (3.2+3.4)										76
3.6 Number of credit points										3

### 4. Pre-requisites (where appropriate)

4.1 Curriculum	-
4.11 Competence	Baccalaureate level of instruction and general knowledge Beginner literacy with desktop applications, including Internet utilization

### 5. Requirements (where appropriate)

5.1. For the course	Auditorium or large lecture room. Audio-video installation for on-screen presentations (with room speakers). WiFi or cable Internet connectivity.
5.2. For the applications	Auditorium or large lecture room. Audio-video installation for on-screen presentations (with room speakers). WiFi or cable Internet connectivity. Writing board (classical or interactive) / Flip chart

### 6. Specific competence

6.1 Professional competences	<b>C5</b> - Design, lifecycle management, integration and integrity of hardware, software and communication systems (2 credits) <b>C5.1</b> - Specifying the relevant criteria regarding the lifetime cycle, quality, security and computing system's interaction with the environment and human operator <b>C5.2</b> - Using interdisciplinary knowledge for adapting an information system to
------------------------------	---

	<p>application domain requirements</p> <p><b>C5.3</b> - Using fundamental principles and methods for security, reliability and usability assurance of computing systems</p> <p><b>C5.4</b> - Adequate utilization of quality, safety and security standards in information processing</p> <p><b>C5.5</b> - Realization of a project including problem identification and analysis, design and development, while proving the understanding of the basic quality needs and requirements</p>
6.2 Cross competences	<b>TC1</b> - Honorable, responsible, ethical behavior, in the spirit of the law, to ensure the professional reputation (1 credit)

### 7. Discipline objective (as results from the *key competences gained*)

7.1 General objective	To provide the course graduate with a set of competencies, skills and level of knowledge about him/herself which allows the formation of a competitive advantage and to provide to course graduate with a better understanding of his/her current academic status and curriculum
7.2 Specific objectives	<p>To facilitate domain-specific learning and knowledge acquisition by providing a larger perspective on personal and professional development;</p> <p>To enhance personal determination and academic engagement as a basis for future competitiveness;</p> <p>To allow the course graduate to acquire specific tools and skills needed for personal and professional assessment, engagement, planning, organizing, expression, and networking.</p>

### 8. Contents

8.1 Lectures	Hours	Teaching methods	Notes
Key-concepts of personal and professional development. Self-concepts, qualities and virtues, self-awareness and self-knowledge (self-assessment versus external evaluations)	2	Interactive lectures: - Exposition - Discourse - Debating - Case studies - Problem-solving - Heuristic conversations - Role playing	
Motivation and self-determination. Goals, objectives, interests, needs, desires, ideals, aspirations, expectations and incentives.	2		
Learning and learning styles. Self-directed learning, adult learning and continuous learning (lifelong learning)	2		
Social modelling and key-persons/models. The basics of social learning and the significant others	2		
Rationality, control, self-regulation and decision making. Processes, strategies and decision making tools	2		
Critical thinking and scientific reasoning. Cognitive biases, logical fallacies and cognitive distortions	2		
Assertive communication, persuasion and negotiation	2		
Significant personal objectives: Qualities and virtues	2		
Significant personal and professional objectives: Health, safety, fulfilment, satisfaction and happiness	2		
Tools, means and methods for productivity enhancement: Strategic planning, Decision-making, Information management	2		
Tools, means and methods for productivity enhancement: Organization, scheduling, planning and budget management	2		
Tools, means and methods for productivity enhancement: CV building (principles, alternatives, instruments)	2		
Tools, means and methods for productivity enhancement: Social networking, Professional networking (virtual dedicated networks and communities)	2		
Personal and professional development plans. Design and presentation	2

*\*Se vor preciza, după caz: tematica seminariilor, lucrările de laborator, tematica și etapele proiectului.*

### **9. Bridging course contents with the expectations of the representatives of the community, professional associations and employers in the field**

By completing this course, the course graduate is expected to have acquired a series of specific and general declarative and procedural knowledge, as well as have built a series of competencies, which, in their togetherness contribute to an increased capacity to find employment, communicate professionally and informally, collaborate and work closely with other professionals and non-professional, and an increased ability to promote and capitalize upon personal and professional traits and activities.

### **10. Evaluation**

Activity type	Assessment criteria	Assessment methods	Weight in the final grade
Course	Standardized written test with multiple choice questions. Collaborative and individual semester projects. Collaborative and individual homework. Assessment criteria include: accuracy/precision, completeness, fluency, and relevance	Written test Duration: 1 hr. Individual portfolio	60% 40%
Seminar			
Laboratory			
Project			

Minimum standard of performance:  
The total weighed score exceeds the equivalent of 5/10 of the final grade.  
Each assessment exceeds 50% of the allotted grading.

Course responsible  
DPsy. Dorin Stanciu PhD, Lecturer

Head of department  
Prof.dr.eng. Rodica Potolea
